

RECIPE WORKSHEET

Note: If your recipe sheet is already created, simply add any additional information we are requesting to your existing sheet.

Recipe Name _____ Company Name _____

Ingredient	Raw or Cooked	Brand Name (if applicable)	Amount (oz, cup, lb)

PROCESSING INFORMATION

The following information is needed for recipe analysis:

- Yield of recipe after product is cooked: _____ . (If unknown, leave blank.)
- Weight of product after processing: _____ . (Example: per biscuit, the weight of one biscuit.)
- How much product will go into container: _____ . (This is the net weight.)
- Serving size: _____ . (example: 1 cup) [to be reviewed by Energyent Inc. and conformed to FDA guidelines.]
- Space available on packaging for nutritional information: Height _____ X Width _____ .

Package Total Square Inches _____ . Package Height _____ inches / Width _____ inches / Depth _____ inches.

(Please provide total square inches of package as well as height, width, depth, in inches.) The FDA has certain guidelines which determine the format used, i.e., vertical, full vertical, tabular, or linear. For packages with a total surface area available for labeling of 40 square inches or less, the required nutrition information may be condensed to a tabular or linear format when there is not enough space for a full vertical or vertical format. In addition, when the shape or size of the package cannot accommodate the full vertical or vertical format, the linear format can be used. Energyent Inc. will discuss the final decision on the label format once dimensions are received.
